

Your customers trust you.
You Trust TransTec®.

We're working on the job you may work on 10 years from now.

TransTec® kits are produced by some forward thinking people. The seals we're designing today will be installed as original equipment in cars manufactured five to ten years from now. Which means in 2025, you may install one of our power steering kits with the original equipment parts we're producing today.

Doesn't it make sense to install the same parts as original equipment manufacturers? Your customers trust you. You **Trust TransTec®**.
