

Bulletin

Application: GM 4T40E/4T45E 1995-Up
Subject: Valve Body Gasket Revision

The valve body gaskets have been revised for all models of the 4T40E and 4T45E. A slot has been added to the upper and lower gaskets to correspond to the addition of a hole in the separator plate. The added slot does not interfere with the channel plate or valve body castings. The new gaskets, TransTec #12296 and #12297, WILL service ALL models of this unit from 1995-Up. The updated gaskets will replace the previous design in TransTec kits as stock is depleted.
