Application: Allison MD3000 Series

Subject: Suction Filter Gasket

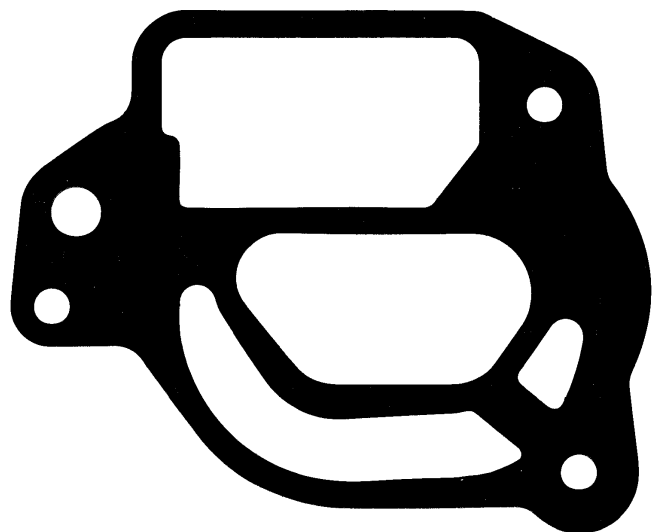

Allison changed the suction filter and suction filter housing for the MD3000 series transmission. The new filter/housing is now a one-piece design, as opposed to the previous two-piece design. This “late” one-piece filter housing requires a new design gasket. The new gasket, TransTec #12289 (OEM #29537066) , will retrofit back provided that the “late” one-piece filter housing is used.

The late, one-piece filter housing assembly can be ordered from Allison under OEM #29537067.

All TransTec valve body kits for the MD3000 series with a date code of B02 and later contain both the early and the late design gaskets.

EARLY – Used with two-piece filter housing assembly.

LATE – Used with one-piece filter housing assembly.
