Application: Various Domestic and Import Units

Subject: New Material Check Balls in TransTec Kits

The material used in valve body/case check balls in many domestic and import units has been updated. Many common size Viton® check balls are being replaced with a material called Torlon®. Torlon has the sealing capability of Viton, the durability of metal, and is lighter than both. Being lighter, it provides a quicker action of the ball to fluid flow.

The new TransTec parts are being added to all gasket sets and overhaul kits (domestic and import applications) currently using the Viton check balls, as follows:

Size	TransTec Part Number	
	Previous - Viton	New - Torlon
1/4"	32404	30137
1/4"	32729	30137
1/4"	32740	30137
5/16"	32405	30138
7/32"	32407	30141

Viton is a registered trademark of DuPont Dow Elastomers, L.L.C.

Torlon is a registered trademark of Solvay Advanced Polymers, L.L.C.
