

### 4T65-E Rubber-Coated Metal Channel Plate Gaskets

Corteco is pleased to announce the availability of rubber-coated metal channel plate gaskets for the GM 4T65-E transmission.

These rubber-coated metal channel plate gaskets have been designed to help eliminate gasket blowouts caused by reduced bolt load along with warped channel plate and case castings. TransTec® part numbers B36480 and B36481 are easier to align during installation and are now a featured item in all TransTec® 4T65-E overhaul kits with date codes of 10/07/09 and later.

Description	TransTec®
4T65-E upper channel plate gasket	B36481
4T65-E lower channel plate gasket	B36480
