

**APPLICATION: Honda 4 and 5-speed transmissions**  
**Subject: Converter Hub O'Ring**

With the release of Honda 4-speed overhaul kits and various Honda 5-speed overhaul kits, TransTec® brand kits contained a black polyacrylate o-ring for the torque converter hub. With the introduction of some later 5 speed units, a larger viton o-ring with green Teflon® coating is used.

Feedback from the field indicated that the green Teflon® coated o-ring was favored among builders for ease of identification within the kits. However because of the size difference between the black and the green coated o-rings, the same one could not be used for all applications.

In response to the highly valued opinion of these professionals, TransTec® brand kits will now include a new green Teflon® coated viton o-ring in place of the black polyacrylate o-ring.

TransTec® part number B17535 is also available for bulk sales.
