6mm Variator Pulley Guide Ball - TransTec® #B82680

Chain driven continuously variable transmissions (CVTs) present rebuilders with a challenge when it comes to the 6mm variator pulley guide balls. These small components can sometimes show significant wear or may be lost during disassembly of the unit, leaving you with few options for replacement.

To help alleviate a stalled rebuild due to worn or lost components, TransTec® CVT kits have been updated to include the appropriate number of guide balls for each.

Please see the following table for specific quantities

Application	TransTec® Kit	Quantity
JF009E	DP2588	12
JF010E	2507	21
JF011E	2557	12
JF012E	DP2660	12
JF012E w/Pistons	DP2682	12

If the guide ball channel is worn, the entire variator will need to be replaced

All the above listed kits with a date code of 12/20/17 or later include part number B82680
